Logscape
Protected Case Study

Background
Protected is a UK based insurance specialist, in 2015 they purchased Accelops, and with it realized that they needed this style of visibility across their entire infrastructure stack, but without the steep learning curve, and unfeasible configuration workload.

Challenges
Protected were looking for a solution that could be deployed throughout their entire organization without the large configuration steps required by other SIEM's, the data was intended to mainly be a mix of Syslog and SNMP with a data volume varying between 20-35gb per day.

Solution
A Logscape installation was deployed with sufficient capacity to handle up to 100 GB per day allowing for the Protected environment to scale without worrying about the capacity of their Logscape instance. This installation has provided them with the depth of insight into their environment for which they were looking, without difficult and time consuming configuration steps.

Pricing
A Key aspect in Protected's choice of Logscape was our industry defining flat-fee pricing model, once you've purchase a Logscape license there are no ongoing fees for working with your own data. Use Logscape for free, forever.

protected
.co.uk

• Provides Geo-IP rendering

• Full Stack Monitoring

• Sized deployment so growth is not an issue

• Assists in the aim of PCI and ISO20071 certification.

• Credited for its brilliant user experience

• Monitors internal mail server

• Monitors web servers

• Monitors internal audit logs

"Over the past 3-4 Months, I've look at every almost every solution on the market, ELK is notoriously complex and Elastic search would randomly break. Splunk worked perfectly, but with its pricing model was like being handed a Ferrari and told you could only drive 5 miles. Logscape on the other hand offers flat fee, and worked flawlessly."
